

Faculty of Medicine of Poitiers : Study program offered in 4th and 5th year (DFASM 1 and DFASM2)

Throughout their stay in the faculty of Medicine of Poitiers, incoming medical students will be involved in

- e-learning courses organized in modules
- daily clinical rotation in medical units

How to organize and choose the courses

Incoming students have to choose one module for each term: A or B for fall term, C or D for spring term. The content of these modules is detailed below and cannot be modified.

Teaching of these modules is in french and mainly organised as e-learning. Each student will be given an e-count on the virtual teaching desk of the faculty of medicine. He will have to fill in exercises every week on the virtual educational desk. The exercises will assess knowledge and skills acquired upon the various specialties of the module.

This e-learning covers the official objectives that are required for the final national exam at the end of the sixth year of medical studies in France. These objectives are detailed on the following link:

<http://medphar.univ-poitiers.fr/international/venir-etudier-a-poitiers-950361.kjsp?RH=1369384801785>

How to organize the internship

The incoming Student will be involved every morning in clinical rotations in the medical units that he chooses throughout his stay.

The choice of the medical units for these clinical rotations will be done with the local coordinator of student exchanges according to the incoming students wishes and local possibilities. Once this program is established, the student will be asked not to change it. Each student will have to stay at least in each medical unit.

Validation

Validation of theoretical teaching will be validated by continuous control based on the results of the exercises filled in by the student

- On line (weekly homework exercises)
- During presential exams in the faculty of medicine

Faculty of Medicine of Poitiers :
Study program offered in 4th and 5th year
(DFASM1 and DFASM2)

In each medical unit, the validation of the clinical rotations will be done by the teacher in charge of the students
